DETAILED ACTION

Information Disclosure Statement

No Information Disclosure Statement submitted.

Drawings

The drawings are objected to as failing to comply with 37 CFR 1.84(p)(5) because they do not include the following reference sign(s) mentioned in the description: 137, 121. A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

Specification

Applicant is reminded of the proper language and format for an abstract of the disclosure.

The abstract should be in narrative form and generally limited to a single paragraph on a separate sheet within the range of 50 to 150 words. It is important that the abstract not exceed 150 words in length since the space provided for the abstract on the computer tape used by the printer is limited. The form and legal phraseology often used in patent claims, such as "comprising" and "said," should be avoided. The abstract should describe the disclosure sufficiently to assist readers in deciding whether there is a need for consulting the full patent text for details.

The language should be clear and concise and should not repeat information given in the title. It should avoid using phrases which can be implied, such as, "The disclosure concerns," "The disclosure defined by this invention," "The disclosure describes," etc.

Claim Objections

Applicant is advised that should claims 1-16 be found allowable, claims 17-32 will be objected to under 37 CFR 1.75 as being a substantial duplicate thereof. When two claims in an application are duplicates or else are so close in content that they both

Art Unit: 3679

cover the same thing, despite a slight difference in wording, it is proper after allowing one claim to object to the other as being a substantial duplicate of the allowed claim

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-32 are rejected under 35 U.S.C. 102(b) as being anticipated by US patent 3933377, Arrowood.

In regards to claims 1 and 17, Arrowood discloses a coupling device (9) to be supported by a supporting member (50) capable of being secured to a structure (51) above the coupling device, the supporting member comprising a stem (53) having a free end portion, the coupling device comprising a tubular member (10, 16, 17, 18, 31, 54) having opposed axially aligned ends, each of the ends adapted to receive a mating conduit (14, 15), the tubular member having a top surface (54) and an aperture in the top surface adapted to engage the free end portion of the stem of the supporting member.

In regards to claims 2 and 18, Arrowood discloses the top surface being raised relative to the exterior surface of the tubular member.

In regards to claims 3, 4, 19 and 20, Arrowood discloses the aperture being threaded internally and the stem of the supporting member being externally threaded

Art Unit: 3679

inatingly threaded at least at its free end for engaging into the internally threaded aperture.

In regards to claims 5-8 and 21-24, Arrowood discloses a lock nut (52) along the stem for locking the free end of the stem into the internally threaded aperture.

In regards to claims 9-16 and 25-32, Arrowood discloses a stop member (11) projecting internally at about the middle of the tubular member.
